Education

University of Petroleum and Energy Studies

Bachelor of Technology in Computer Science

2020-2024

Dehradun, Uttarakhand

Experience

Datopic Technologies

Software Engineer

Noida, UP

Feb 2024 – Present

- Built and shipped full-stack features using **Node.js, Express.js, React, Redux, and MySQL** for monitoring platforms used by **1,100+ daily users** across multiple dashboards.
- Designed REST APIs with pagination, filtering, and sorting for large datasets, reducing API response time by **41% (850ms to 500ms)** for high-traffic endpoints.
- Optimized database queries and added indexing for transaction and audit tables, improving query performance by **25%** and reducing backend load during peak usage.
- Developed a real-time transaction dashboard using **React, Redux, and WebSockets**, processing **12,000+ daily updates** with stable UI performance and minimal re-renders.
- Refactored backend into modular **Express.js middleware, controller, and service layers**, reducing feature development time by **20%** and improving maintainability.
- Implemented **JWT authentication** and role-based access control across **3+ user roles**, eliminating unauthorized access incidents in internal tools.
- Reduced redundant API calls by **30%** by centralizing data fetching in Redux and creating reusable components across dashboards.
- Improved production stability by adding structured logging and validation, reducing recurring issues by **35%** and cutting debugging time by **1 hour per incident**.

Projects

Automotive Accessories E-Commerce Platform | *React, Redux, Node.js, Express.js, MySQL, REST APIs, JWT*

- Developed a full-stack e-commerce platform using **React, Redux, Node.js, Express.js, and MySQL** supporting **1,000+ products** with product listing, cart, and checkout workflows.
- Designed REST APIs with pagination, filtering, and search for large datasets, reducing product listing load time by **30%** and improving API response consistency.
- Optimized frontend performance using centralized **Redux state management**, reducing redundant API calls by **25%** and minimizing unnecessary re-renders.
- Designed normalized **MySQL schema** for products, users, and orders, improving query performance by **20%** through indexing and query optimization.

Used-Car Lead Management Platform | *React, Node.js, Express.js, MySQL, REST APIs*

- Built a full-stack lead management platform using **React, Node.js, Express.js, and MySQL** to replace manual WhatsApp-based lead tracking.
- Implemented dynamic form validation and multi-image upload, reducing incomplete submissions by **25%** and supporting **20–30 weekly leads**.
- Developed REST APIs for lead creation, status tracking, and dashboard analytics, improving lead processing efficiency and reducing manual follow-ups.
- Structured database schema for leads and image metadata, enabling scalable storage and faster retrieval of lead information.

Technical Skills

Languages: JavaScript (ES6+), TypeScript, SQL, HTML5, CSS3

Frontend: React.js, Redux, Redux Toolkit, Next.js, Tailwind CSS, Responsive Design, WebSockets

Backend: Node.js, Express.js, REST APIs, JWT Authentication, Middleware, API Design

Databases: MySQL, MongoDB, Firebase Firestore

Tools: Git, GitHub, Postman, Docker, AWS (EC2, RDS), CI/CD Basics

Core Concepts: Data Structures and Algorithms, System Design, REST Architecture, Authentication, State Management, Performance Optimization
